Designed to solve a wide variety of water quality issues, Nelsen reverse-osmosis drinking water systems provide you with compact, affordable and effective solutions for achieving the best possible quality drinking water for your home.

An innovative leader in water treatment since 1954, Nelsen assures you the highest quality and reliability in the industry. Nelsen Water Treatment Systems are sold, installed and serviced by independently owned and operated Nelsen Dealers nationwide.
Nelsen reverse-osmosis drinking water systems significantly reduce unwanted substances bigger than 0.0001” such as carcinogens, heavy metal ions such as cadmium, chromium, lead and mercury; chlorine, cryptosporidium, salts, turbidity, nitrate, VOC’s, organic compounds, dissolved solids, tastes and odors leaving only clean, great tasting water.

How does the Process Work

Reverse osmosis is the same process used by most major bottled water suppliers. With a Nelsen Reverse Osmosis Drinking Water System, you can have the same highest-quality water available from your own faucet for a fraction of the cost of bottled water.

Just how does the reverse osmosis process work? During the process, water is forced through a semi-permeable membrane that traps contaminants. These contaminants are then flushed out of the system and down the drain, leaving your drinking water clean and fresh.

**PRE-FILTER (Sediment)**
- Removes sediment, rust, dirt and other solid debris.

**PRE-FILTER (Carbon Block)**
- (Activated Carbon) Final polish to remove any objectional tastes and odors from storage tank prior to water consumption or use.

**RO MEMBRANE**
- Thin Film Composite design. Rejects 98% of the dissolved metals and salts, plus other harmful contaminants.

**POST-FILTER (Carbon Block)**
- Removes any remaining objectional tastes and odors picked up in the storage tank.
How the **Quick Change, Twist & Loc** Works

1. Pull bottom of Cartridge out to a 45° angle.
2. **Twist** the filter cartridge counter clockwise and pull.
3. Line up the bayonets (tabs) of cartridge in the slots, insert and **Twist 1/4 turn to Loc** the cartridge.

**Easy Cartridge Removal & Replacement WITHOUT Turning Off Water**

**Manifold**
- Filter Head
- 1/4" Feed Line
- 3/8" Faucet Line
- 3/8" Tank Line

**Cartridges**
- Sediment Filter 13"
- Carbon Block Filter 13"
- RO 75GPD Membrane
- Flow Regulator to Drain

**Installation**
- Tank Ball Valve
- 3.2 Gallon Storage Tank
- Faucet & Installation Hardware

Installation Kit includes tubing, drain clamp, faucet, feed water angle stop adapter and storage tank shut-off valve.
## Specifications

**Gallons per day (L/day)**

- 30.65 GPD (116.02 L/DAY)

**Typical System Flow Sequence**

- Sediment Filter ➔ Carbon Block Pre-filter
- Reverse Osmosis Membrane ➔ Storage Tank
- Carbon Block Post-filter ➔ Dispensing Faucet

**Sediment Filter (Stage 1)**

- 5 Micron

**Carbon Block Pre-filter & Post-filter (Stage 2&4)**

- Carbon Block 5 Micron

**Reverse Osmosis Membrane (Stage 3)**

- Thin Film Composite

**Storage Capacity**

- Plastic Coated Metal – Capacity 3.2 Gallon (12 Liters)

Part No. TWIST-LOC-LIT

---

* The stated product performance is based on data taken after 30 minutes of operation at the following test conditions: 2,000 mg/L NaCl solution at 225 psig (1.5 MPa) applied pressure, 15% recovery, 77° F (25° C), pH 6.5–7.0

** Rated Life and Capacity are dependent on local water conditions and level of pre-filtration.

The disposable filter cartridges must be replaced every 6 months and 24 months for the system membrane, at the rated capacity or if a noticeable reduction in flow rate occurs.

Performance of the reverse osmosis membrane is affected by several factors which must be considered when judging the condition of the system. The main factors which affect system performance are pressure, temperature, total dissolved solids level, recovery and pH.
